Specifications

CAPACITY: 14 GA.

This machine comes with a 1/2 HP electric motor, 110-115V single phase. It is capable of producing Beading, Crimping, Flanging, and other specific functions. Aside from our competitors, the RAMS 2019 has several beneficial user friendly features, Including: A main switch and air regulator. An integrated roller storage system to house your more commonly used roll sets. A user Friendly Control panel allows "on the fly" pressure and speed adjustments. A unique square drive shaft that is stronger and eliminates the need for keyways. A time delay roller rotation can be adjusted to allow rollers to begin rotation prior to or after material contact. An easy adjustable oversized back gage. A full 12" throat depth wih no interference. A pressure sensitive foot pedal allows the user to control the time it takes the rollers to contact the material.
